PERMANENT NOTICES

Lusaka Agreement

The African Regional Intellectual Property Organization (ARIPO) was established by the Agreement on the Creation of the African Regional Intellectual Property Organization (ARIPO) (Lusaka Agreement) adopted on 9th December, 1976. The Objectives of the Organization are, *inter alia*, to promote, harmonize and develop the intellectual property system of the region.

Membership of the Organization is open to states members of the United Nations Economic Commission for Africa or of the African Union. States become members by depositing an instrument of accession to either the Lusaka Agreement or the Harare Protocol or the Swakopmund Protocol. The number of Member States of ARIPO is as reflected in the table on the right of this page.

The Harare Protocol

Within the framework of ARIPO, a Protocol on Patents and Industrial Designs was adopted on 10th December 1982 (the Harare Protocol) and entered into force on 25th April, 1984. It has since been amended multiple times.

The Protocol empowers ARIPO to grant patents and register industrial designs and utility models on behalf of the Harare Protocol contracting states. All ARIPO Member States are signatory to this Protocol except Somalia.

The Banjul Protocol

The Banjul Protocol on Marks was adopted on 19th November, 1993. This protocol, as well, has been amended several times. The Protocol empowers the Organization to register marks centrally for those ARIPO Member States which are its signatories (see table on this page).

The Swakopmund Protocol

On 9th August 2010, ARIPO Member States held a diplomatic conference in Swakopmund, Namibia, at which they adopted a third ARIPO protocol called the Swakopmund Protocol on the Protection of Traditional Knowledge and Expressions of Folklore.

This protocol will come into force three months after six ARIPO Member States have deposited their instruments of ratification or accession, as the case may be.

Every member state of the African Union or of the Economic Commission for Africa is eligible for ARIPO membership. To join ARIPO, any such state may accede to the protocol. The accession will entail acceptance by that state of provisions of the Lusaka Agreement.

Patent Cooperation Treaty

The Patent Cooperation Treaty (PCT) is administered by the World Intellectual Property Organization (WIPO). Since the Harare Protocol was linked to the PCT, the PCT has become important to the development of the patent system of all ARIPO Member States.

Besides benefits of membership in the PCT Union available from WIPO, ARIPO Member States become open to the flow of international patent applications filed through the PCT process. This has increased the number of patent applications filed in ARIPO Member States using the PCT-Harare Protocol route beyond those applicable under the traditional national route.

This increase means more income earned by the national offices. Consequently, some Member States no longer pay ARIPO membership contributions as income from the PCT-Harare Protocol route fully settles this.

GENERAL NOTICES

Data Flow Symbols

Symbols in the following table are ARIPO-originated and are used in this publication for directing the flow of announcement columns, namely that a record (which is the largest unit in an announcement column) is ended and that an announcement column continues on the next page or it is ended.

Symbol	Interpretation	Symbol	Interpretation
●●	End of a record in an announcement column	▶	An announcement column continues on the next page

Data Identification Codes

The data identification codes appearing in the next four tables are WIPO Standards. The first three of these tables contain codes universally known as **I**nternationally recognized **N**umbers for the **I**dentification of **D**ata (INID) Codes. These Standards are, namely, WIPO Standard ST. 60 (*Recommendation concerning bibliographic data relating to marks*), Standard ST. 9 (*Recommendation concerning bibliographic data on and relating to patents and supplementary protection certificates (SPCs)*), Standard ST. 80 (*Recommendation concerning bibliographic data relating to industrial designs*) and Standard ST. 3 (*Recommended standard on two-letter codes for the representation of states, other entities and intergovernmental organizations*).

Plant cultivation system

(57) Abstract

Problems To provide a system for producing safe and high nutrition vegetables at low cost. Means to solve the problems A plant cultivation system for cultivating a plant on a nonporous hydrophilic film, which comprises a nonporous hydrophilic film and a feeding means for supplying water or a nutrient fluid to the lower surface of the film in the absence of a hydro-ponic tank for accommodating water or a nutrient fluid and cultivating a plant therein. As the feeding means, use is made of a water absorbing material which is in contact with the film and which is disposed between the film and a water impermeable material. A system for producing safe and high nutrition vegetables at low cost can be obtained by disposing the water impermeable material directly on ground soil, whereupon the water absorbing material and an irrigation tube are disposed, followed by disposing the film thereon.

Enhancement of antitubercular activity of extracts of salicornia brachiata

(57) Abstract

The present invention relates to enhancement of anti-tubercular activity of active fraction isolated from *Salicornia brachiata*. The invention also discloses the non-toxic nature of the fraction and positively identifies Sucrose as its main constituent. Pure Sucrose is shown to have no anti-tubercular activity indicating thereby that activity of the fraction resides in one or more of the minor constituents. The minor constituents are shown to be relatively low molecular weight entities and a chromatographic technique is disclosed for separating them from the bulk sucrose to probe their activities and structures in detail, as also the possibility of their synthesis if the leads thrown up are novel.

Continuous process for converting natural gas to liquid hydrocarbons

(57) Abstract

An improved continuous process for converting methane, natural gas, or other hydrocarbon feedstocks into one or higher hydrocarbons or olefins by continuously cycling through the steps of alkane halogenation, product formation (car-bon-carbon coupling), product separation, and regeneration of halogen is provided. Preferably, the halogen is continually recovered by reacting hydrobromic acid with air or oxygen. The invention provides an efficient route to aromatic compounds, aliphatic compounds, mixtures of aliphatic and aromatic compounds, olefins, gasoline grade materials, and other useful products.

The distribution of electricity

(57) Abstract

According to the invention an electrical protection assembly for connection between an electrical power supply line and electrical equipment has an insulating mounting structure; a fixed first arm for supporting a fusible device, fast with the mounting structure; a connection arrangement at a free end of the first arm for pivotally connecting a first end of the fusible device thereto; a second arm, connected to the mounting structure and spaced from the first arm; and a hood assembly at a first free end of the second arm for connection with the second end of the fusible device; characterized thereby that the hood assembly is displaceable relative to the second arm and the first arm to be movable away from the connection arrangement upon fusing of the fusible device. Further according to the invention the electrical protection assembly has an insulating mounting structure; fixed first arm for supporting a fusible device, fast with the mounting structure; a connection arrangement at a free end of the first arm for pivotally connecting a first end of the fusible device thereto; a second arm, connected to the mounting structure and spaced from the first arm; and a hood assembly at a first free end of the second arm for connection with the second end of the fusible device; characterized thereby that the electrical protection assembly further has an arcing contact positioned between the hood assembly and the connection arrangement, close to the hood assembly.

Recycling of waste material

(57) Abstract

A process and apparatus for recycling municipal domestic waste comprises subjecting the waste to steam at 150ttC-200°C at above atmospheric pressure but less than twice atmospheric pressure, After steam treatment, the resultant material is separated into constituent parts and biomass and/or plastics subjected to further treatment: The further treatment preferably produces bioethanol from the biornass and diesel from the plastics. As an alternative, some or all of the biomass may be gasified in order to produce hydrogen which may, in turn be fed to a fuel cell to produce an electrical output.
